

LEASE MOBILE PHONES

Leasing your company's telephones allows you to monitor technical development instead of constantly remaining one step behind. At the same time, choosing to lease is good for the environment. This is how to make mobile phone use cheaper and easier:

LEASING IS GOOD FOR THE ENVIRONMENT

Leasing your technical equipment is a flexible and economical way of accessing the latest technology. Another advantage which has become increasingly apparent of late is the fact that a leasing solution is also good for the environment. When you lease your technical equipment, every component becomes part of an eco-cycle where everything that can be recycled or reused is utilised. Visit teliafinance.com to find out more about this scheme and its benefits.

DAMAGE PROTECTION

You can add comprehensive insurance to our leasing offer. This provides effective protection against financial setbacks and disruptions to business should your equipment be damaged. We then restore your functionality quickly by repairing or replacing the equipment, with no reduction in value, throughout the entire agreement period.

IN THE EVENT OF AN ACCIDENT

Mobile phones do sometimes fall to the floor or take an accidental bath. If you choose comprehensive insurance as an add-on option, you will receive compensation in the event of an accident. You can also conclude a service agreement with the Telia partner supplying the phones. This may involve benefits in the form of preconfigured phones or faster repairs, for example.

- If you buy your mobile phones from Telia, you can lease them from Telia Finance. With this, we provide all your company's staff with phones within the scope of a single lease agreement.
- We work together to devise a selection of models to be offered, and the company then pays a fixed fee per phone and month for these. You are then aware of all expenses in advance, making it easy to budget, administer and follow up.
- The leasing solution also includes an asset management function, providing you with a good overview of all the mobile phones at your company. This helps you to maintain a better overview when it is time to replace old phones with newer models.
- Today's mobile phones are often part of the company's IT infrastructure, connected to the Internet, email and business system, for instance. This is handy, but also something of a security risk. This is why it is important for leased mobile phones to be disposed of securely when they are returned. And if you lease from us, this is exactly what we do!
- Another important element in our business model involves disposing of and recycling used mobile phones with the environment in mind. This service involves collecting your end-of-life mobile phones and deleting all information from them before recycling the handsets in an eco-friendly way.

HOW TO TAKE THE NEXT STEP
